## Park Information

**DIRECTIONS:** Drive north from Lougheed Highway on Harris Road. Turn right on to McNeil Road. Turn left on Rannie Road and follow to the end. The park is a wilderness area and wildlife habitat with a large patch of protected marshland. The marsh and surrounding wetlands are reportedly home to more than 200 species of birds and waterfowl. The main trail starts out as a wide gravel walkway with water on each side, then changes course and becomes a narrow and wooded muddy path dotted with cattails, pond weeds and blackberry bushes. There are countless opportunities anywhere along the trail system to view wildlife and the wide variety of vegetation and plants in the marsh. Along the way, you're likely to come upon trumpeter swans, herons, beaver dams and flocks of fire-engine-red hummingbirds. For the best views, climb one of the wooden observation towers. In winter months, dress warmly and take along rain gear. In summer, the sun can be unrelenting on the open dykes. Wear a sun hat and take along a good quality sunscreen. Good walking shoes, binoculars and a camera are essential. **Walking distance** around Katzie Marsh - 6.5 km. **Time** - 2-3h.

**STOP** No access beyond these points during the nesting period from March 15 to August 15 **DIFFICULTY:** Flat
